

Physical Security Questions & Unisys Answers

Can't get a single dashboard view of physical & logical security systems? Unisys lets you leverage converged technologies for amplified security capabilities across physical and logical domains along with real-time actionable intelligence for effective security management.

Can't determine what identity management solution to put in place? Let us show you how we authenticate "something you have" (a smart phone), "something you know" (a PIN/ passphrase), "something you are" (multi-modal biometrics, e.g. face, voice), and "somewhere you are" (GPS) to confirm that the end-user is genuine before they access your data.

Can't store your video, images, audio and other media securely so that its integrity is accepted in criminal or civil proceedings? Let us show you how our Unisys SIMS manages all digital evidence in a secure way that gives you confidence, supporting digital justice processes.

Can't reduce operational costs while maintaining security levels? We can show you how to maximize value of existing and future security investments by leveraging open, standards-based designs, migration strategies and methodologies.

Can't securely provide mobile user authentication? Let us show you how we provide multiple levels and types of authentication, authorization to prevent identity theft.

Can't verify people's identities with confidence and accuracy with so many channels? Unisys IM solution has Multi Factor Authentication, robust analytical engine and multi modal biometric capabilities based on our layered security concept that provides a fine balance between security and convenience to ensure that.

Integrated Solutions for Physical Security

Identity fraud and unauthorized access towards corporate assets continue to be pressing concerns for enterprises. With the proliferation of channels & devices, personal as well as corporate information has become extremely vulnerable to external and internal threats. Physical security is a valuable tool for companies in combating these types of attacks.

Physical Security allows enterprises to monitor all video and other captured physical security data for a holistic view of any unusual behavior, tie user access to corporate data by their identification at the physical perimeter and integrate with security infrastructure to shut down access if unauthorized activity is detected.

Unisys converged Identity & Access Management solution enables organizations to reach the goal of One Identity, One Credential. Our Fraud Detection solutions improve defenses against large-scale fraud by detecting relationships and collusion of multiple individuals, synchronized events and fraud scenarios spanning multiple channels. We can also manage all your image processing, storage and security requirements so you can focus on your core business.

Unisys Physical Security Portfolio

Unisys Security Solutions unifies physical and logical security for the most affordable, operational, actionable physical and IT perimeter security – and we do that well.

Identity Management: Our state-of-the-art, service-oriented platform protects user data by identifying individuals in a system and controlling their access to resources by associating user rights and restrictions with their identity, thus protecting against identity theft/breach, and frauds. This is achieved through Multi Factor Authentication (MFA), a unique multi-layer approach, customized to each organization's security requirements, and unifies multi modal biometric types with non-biometric credentials.

Security Solutions Award Winning Portfolio:

ADVANCED PRODUCTS

LOGICAL

- Stealth(core)
- Stealth(cloud)
- Stealth(compute)
- Stealth(mobile)
- Next Generation Threat Protection (NGTP)

PHYSICAL

- LPSS
- Identity Management
- Image Processing
- Counterfeit and Fraud Detection

EXPERIENCED PROFESSIONAL SERVICES

TECHNICAL

- Testing
- Incident Response
- Architecture

EFFICIENT MANAGED SERVICES

- SIEM
- Endpoints
- Firewalls
- Applications
- Assurance
- GRC
- Threat Analysis
- Data Loss Prevention
- Video/Image Management

STRATEGIC

- CISO Advisory
- Security Assessments
- Security Planning
- Systems Integration

Counterfeit and Fraud Detection: Unisys provides real-time and proven solutions for anti-money laundering, terrorism financing activities, fraud detection and risk management. Our solutions help enterprises combat sophisticated fraudulent attacks before they occur. The system can detect and track collusion among a group of individuals, relate multiple events into potential criminal scenarios, and conduct comprehensive situational analysis in real time.

Unisys Security Award Winning Solutions for:

Cloud Security	Regulatory Compliance
Enterprise Security	Micro Segmentation
Endpoint Protection	Access Control
IoT Security	Identity Management
ICS/SCADA Security	Video/Image Security
Data Center Consolidation	

It's time to try a fresh approach to security, from a provider that's innovatively solved many of the problems you face today. Unisys Security is a fully integrated business of global technology provider Unisys Corporation. To get more information or to schedule a discussion and demonstration, please contact your Unisys sales executive or click on www.unisys.com/security to get started.

Location Perimeter and Security Surveillance: Comprehensive, end-to-end integration of disparate security systems and sensors to remove data silos and gaps in our customers' security architecture that may be exploited by unauthorized users on their networks. Our trusted expert advisors with real world experience custom architect solutions depending on each customers' requirements through the entire project life cycle.

Image Processing: Secure Image Management Systems [SIMS] at the core of our solution is an award-winning digital evidence vault - securing and storing images and other multimedia content in an information archive, offloading that time, management and risk to Unisys so you can focus on your business.
