

Security Solutions Unisys Stealth(aware)

Security Questions and Unisys Answers

Want to secure your infrastructure from attacks but don't know where to start?

The first step to securing your infrastructure is awareness of the endpoints and communication happening within it. Stealth(aware) quickly discovers the physical and virtual endpoints on your network and how they communicate with each other. It uses both discovery agents and industry-standard pcap files to uncover high risk / high value traffic and endpoints that you need to secure. The discovered data is presented on an easy-to-use, drag-and-drop visual interface or "canvas".

Want to implement micro-segmentation quickly?

After it discovers your environment, Stealth(aware) proposes security policies – via a visual model on the canvas – for targets ranging from large groups of endpoints all the way down to individual traffic flows. Stealth(aware) modeling intelligently groups together similar endpoints for the application of security policies, enabling you to rapidly develop fine-grained micro-segmentation policies. Stealth(aware) provides multiple model views – you can select the best starting point for your environment and customize the proposed model as needed.

Need to automate the deployment of your security policies but still have control over enforcement?

Stealth(aware) enables you to automate the deployment of your micro-segmentation policies to the endpoints in your infrastructure, while also supporting customization of the level of enforcement. This enables you to roll out a phase-wise deployment, starting off with a 'loose' enforcement so as to not disrupt your existing operations and gradually increase the security.

Speed Your Time-to-Security through Automation and Visualization

Securing your continuously evolving IT environment is a huge challenge, made more complex by the breakdown of the perimeter and the need to protect east-west communication in your data center.

Unisys Stealth® provides a completely different yet extremely effective mechanism, micro-segmentation, to manage security for mission-critical enterprises. And, realizing that merely defining static security policies is not effective – and is increasingly susceptible to advanced threats for our clients – we take a different approach to implementing and managing your micro-segmented environment.

Stealth(aware) gets you to micro-segmentation quicker. It's designed to provide real-time visibility across your physical and virtual infrastructure – so you can identify what you need to secure. Through an intuitive visualization of your traffic flows, Stealth(aware) enables you to easily model micro-segmentation security policies to permit, restrict or completely block communication among your sensitive assets and their end users. You can enforce these policies in real-time by automatically deploying them to your endpoints. In addition, Stealth(aware) gives you fine-grained control over configuration and enforcement of policies, enabling you to tailor your policy definition and adjust it on-the-fly, in line with your specific business requirements.

With Stealth(aware) you're in control of your security posture – with the agility you need to quickly respond to your ever-changing environment.

Award Winning Portfolio:

ADVANCED PRODUCTS

LOGICAL

- Stealth(aware)
- Stealth(core)
- Stealth(cloud)
- Stealth(mobile)
- Stealth(identity)
- Stealth(analytics)

PHYSICAL

- LPSS
- Identity Management
- Image Processing
- Fraud Detection

EXPERIENCED PROFESSIONAL SERVICES

TECHNICAL

- Testing
- Incident Response
- Architecture

EFFICIENT MANAGED SERVICES

- SIEM
- Endpoints
- Firewalls
- Applications
- Assurance
- GRC
- Threat Analysis
- Data Loss Prevention
- Video/Image Management

STRATEGIC

- CISO Advisory
- Security Assessments
- Security Planning
- Systems Integration

Why Unisys?

The Unisys Stealth family of products is just one component of our portfolio of solutions that is trusted by government and commercial clients around the world to deliver mission critical advanced security to counter advanced threats. Unisys has extensive subject knowledge and global delivery experience and footprint, providing faster, smooth, well managed and cost effective services for Unisys Stealth to our clients.

Unisys is a trusted partner as logical and physical security threats converge, and we unify security to bring new ways to solve critical challenges at the point where they converge. Our award-winning, time-tested portfolio of professional services, products, and managed services delivers mission-critical security at scale, helping clients mitigate risk while reducing complexity and cost, and navigating regulatory compliance requirements.

Stealth(aware) Key Features

- **Auto Discover:** Discovers information about your network topology and traffic flow, providing real-time data to help you decide what to secure
- **Auto Configure:** Generates recommended security policies customized to your environment to optimize your security posture
- **Auto Deploy:** Automates deployment of your security policies to accelerate stand-up of network protection

Why Stealth(aware)?

- **Improves your security posture** by discovering all traffic on your network, enabling you to easily identify and stop rogue communication
- **Reduces attack surface** by recommending micro-segmentation policies based on analyzed network data
- **Enhances compliance** with auto modeling and auto deployment of security policies to help address audit and regulatory mandates
- **Provides control and agility** with customization options that support on-the-fly changes to security policy enforcement

Unisys Award Winning Solutions for:

Cloud Security	Regulatory Compliance
Enterprise Security	Micro Segmentation
Endpoint Protection	Access Control
IoT Security	Identity Management
ICS/SCADA Security	Video/Image Security
Data Center Consolidation	

It's time to try a fresh approach to your security, from a provider that's already solved many of the problems you face today. To get more information or to schedule a discussion and demonstration, please contact your Unisys sales executive or visit www.unisys.com/stealth
