

Digistics™ by Unisys

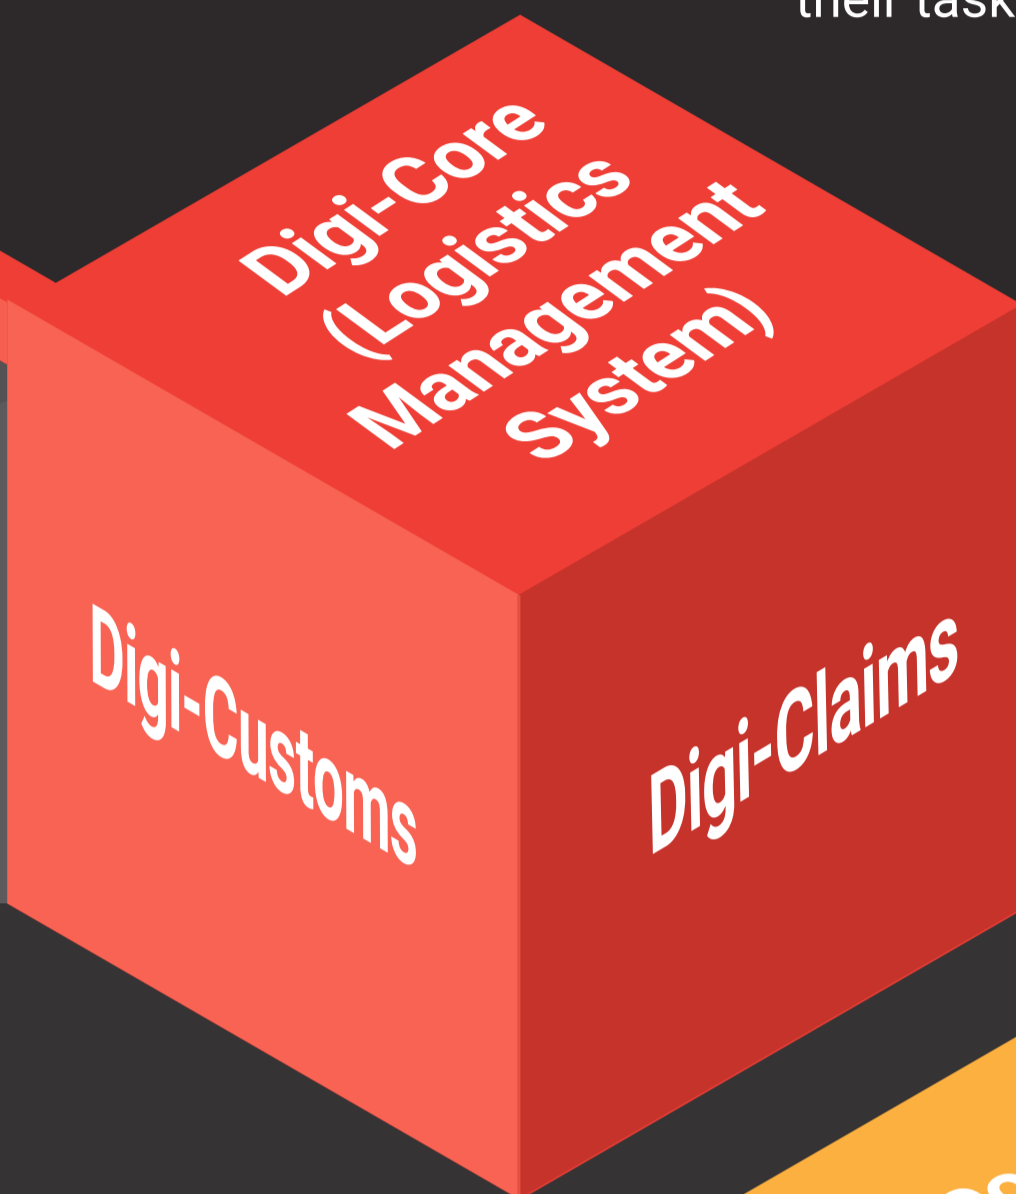

Digistics™ by Unisys is a Cargo Management Logistics Solution designed to help carriers standardize their processes and become more agile through continuous and real-time monitoring. Carriers can choose a single comprehensive solution or pick specific services based on needs. Built-in analytics provide meaningful insights to improve bottom-line and be able to predict top-line growth.

- High visibility track-and-trace technology
- Automated cargo systems that can perform activities and reuse data in the supply chain
- Stable, cloud-based system that can be accessed from any location, including mobile devices
- Predictive analytics solutions use current and historic data while applying machine learning and heuristics technique to predict business outcomes
- Workflow based mobility solutions enable front line personnel use smart devices to perform their tasks effectively

Logistics Management System

Master and House Air waybill management through cargo sales and operations. The capabilities include, but are not limited to, managing bookings, inventory, master Air Waybill, flight schedules and route construction. In the operations side all outbound, transit and import processes are covered.

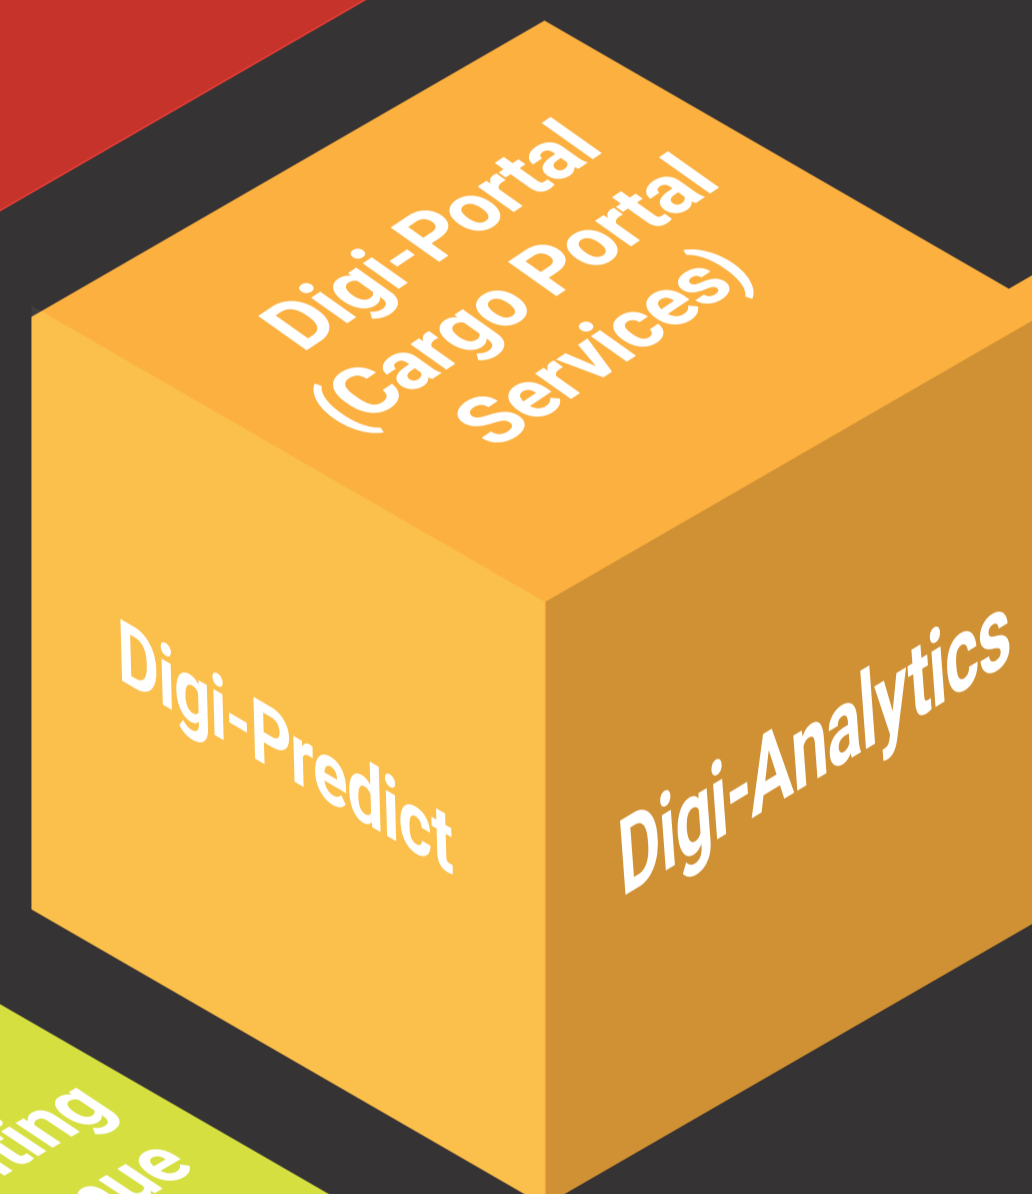

More than 20% of the world's air cargo shipments are processed on Unisys solutions

Cargo Portal Services

An e-commerce workspace between forwarders, airlines, general sales agents and handlers. The capabilities include, but are not limited to, electronic bookings and air waybills (e-AWB) campaign promotions, customs clearance information and shipment tracking functions.

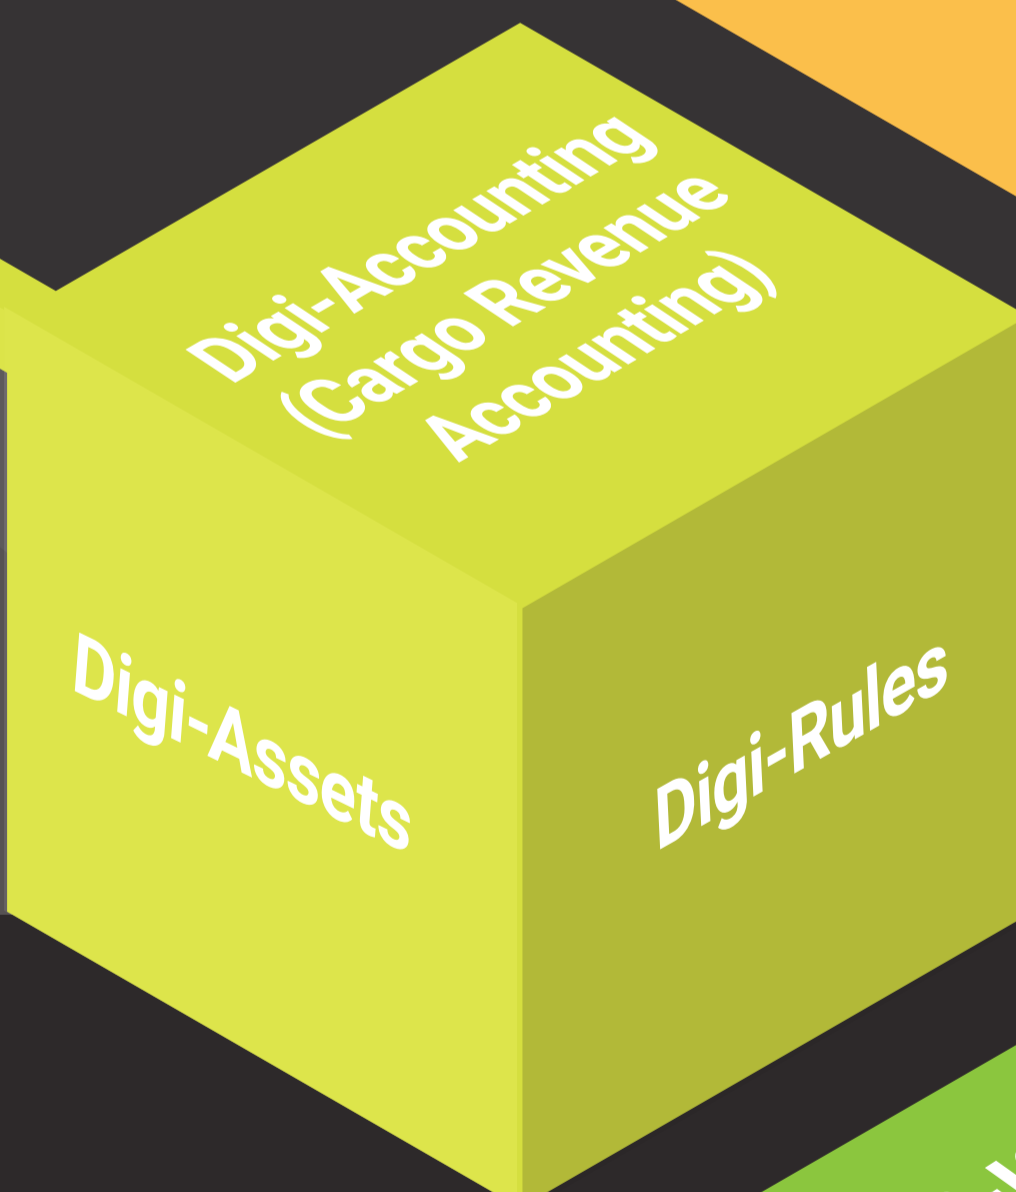

18 of the top 25 global airlines rely on Unisys Solutions

Cargo Revenue Accounting

Experience a seamless and integrated flow of air waybills, shipment movement and payment information to the accounting module. This dynamic information flow lends itself to accuracy of accounting information and reduces the possibility of post invoicing adjustments.

100 million air cargo transactions per month are processed through Unisys cloud services

In transit Service Manager

A qualified airline cargo data management platform, facilitates monitoring airline shipments as a project with very clearly defined milestones. There is proactive automatic alerting when milestones may fail and full support of the IATA CargoIQ specification.
