

We Mitigate and Manage Your Risks, So You Can Focus On What Matters Most – Managing Your Business

Technology is evolving significantly and so is the environment in which businesses are operating. As enterprises continue to extend their operations into cloud-based and virtual environments, they are under constant attack from an increasingly evolving threat landscape. Yesterday's security has fallen behind the needs of today's enterprises. Enterprises can no longer be secure just by protecting their networks from outside attacks because networks no longer are limited to the boundaries of a business. If an enterprise faces a cyberattack, the risk of ripples from this attack can affect partners, customers, and contractors as well, all of whom are connected to the affected network.

To make matters worse, these cyberattacks are getting more sophisticated and occurring more frequently. Enterprises need to be successful in mitigating these attacks every time, whereas these attacks only need one successful intrusion to negatively impact the business. **Systemic risk arising from a cyberattack can even negatively affect an entire industry or the economy.**

Enterprises require security vendors that work as trusted partners and not just as security providers. Unisys provides a consultative approach based on an enterprise's current security posture and builds integrated security measures to counter modern day threat vectors.

Security Solutions: Advanced. Efficient. Trusted.

Unisys Security Solutions enable clients to reduce attack surfaces through micro-segmentation, cryptographically defending entire classes of assets, including endpoints, servers, data centers, and clouds. Unisys delivers micro-segmentation with software that is easy to deploy and manage instead of

OUR AWARD WINNING SECURITY PORTFOLIO

ADVANCED PRODUCTS

LOGICAL

- Stealth(identity)
- Stealth(core)
- Stealth(cloud)
- Stealth(mobile)
- Stealth(analytics)

PHYSICAL

- Image Processing
- Identity Management
- Location Perimeter and Security Surveillance
- Fraud Detection

EFFICIENT MANAGED SERVICES

- Managed Security Information and Event Management
- Security Device Management
- Advanced Threat Protection
- Governance Risk & Compliance (GRC)
- Managed Identity and Access Management

EXPERIENCED PROFESSIONAL SERVICES

TECHNICAL

- Testing
- Incident Response
- Architecture

STRATEGIC

- CISO Advisory
- Security Assessments
- Security Planning
- Systems Integration

maintaining expensive, resource-intensive firewalls, simplifies security policies by making them identity-based rather than IP-based, and leverages micro-segments using the same user identities already in place.

Unisys solutions also integrate physical surveillance with logical security to create a tighter defense, secure Industrial Control Systems and SCADA, and also unify and extend your security policy across your extended enterprise, including supply chains, mobile users and the public cloud.

Client Successes

Unisys enables a leading Credit Card and Payment Provider to offer secure payment services, as well as enhance its security, flexibility and agile development capabilities.

Unisys Enterprise Content Management (ECM) was migrated seamlessly to a new, scalable, virtualized architecture, and Unisys Stealth® was deployed to provide industry-leading levels of security. The client has improved its customer service, by supporting 10,000 service agents, importing 6 million card holder documents per month, and storing 1+ billion images. With Unisys' security solutions, the provider:

- Secured protection of confidential consumer data, and ultimately the client's brand and reputation, from malicious security threats.
- Enhanced operational measures of the service, including 99.9% system availability, and performance to allow card holders to work on documents with service agents in real-time.
- Improved speed to market for new consumer products via agile development methods and a scalable infrastructure.

Unisys helps a leading Southeast Asian bank provide secure digital banking services to its customers, comply with increased regulatory mandates, and guard against social engineering and malware attacks.

Unisys implemented an advanced multi-channel and anti-fraud surveillance system which uses advanced analytics to identify, manage and reduce potential risks by analyzing transactions in real-time for suspicious patterns; the system then responds to identified risks by sending automatic alerts to investigators; depending on the level of suspicion, the system can block or delay a transaction to allow for additional investigation. With Unisys' security solutions, the bank:

- Secured protection against hundreds of fraud schemes that cannot be detected by conventional two-factor authentication
- Saved millions of dollars by preventing fraud attempts in real-time
- Provided a common platform for expansion to other financial crime and compliance areas

Unisys helps a large U.S. petroleum refiner guard its business critical systems from hackers and unauthorized access, reduce the attack surface of its environment, and protect critical IT assets.

Unisys deployed Stealth to mitigate attacks and hacker incidents by rendering devices, data and end users undetectable on networks, without the need to change applications, buy new hardware, or change firewall rules.

Partner with Unisys so you can focus on managing your business, while we keep your business secure. To get more information or to schedule a discussion and demonstration, visit www.unisyssecurity.com
