

The background of the slide features a blue-toned image of three diverse individuals (two women and one man) looking towards the right. In the foreground, a large, glowing white wireframe hand is shown reaching out towards a complex, futuristic digital interface composed of glowing blue lines, spheres, and a central tower-like structure. The UNISYS logo is positioned in the top left corner.

EXECUTIVE OVERVIEW

**Evolve, Implement, Manage:
The New ClearPath Forward
Services Portfolio**

Unlocking the True Value of Your ClearPath Forward System

Innovation at the Ready

Hardware-independent. Software-only. Virtualization-ready. It's innovative qualities like these that make ClearPath Forward™ systems central components of today's tightly integrated, hybrid data center environments.

And it's these very same innovations – along with many others like them – that can help your organization capitalize on our technology roadmap, while continuing to protect your investments in the systems and applications that differentiate your business.

But how? How will you take advantage of everything the ClearPath Forward environment offers today – as well as what we plan to deliver in the future – in a way that emphasizes speed, minimizes risk, and increases cost efficiencies?

The new ClearPath Forward Services portfolio is the key.

Service Delivery Reimagined

We've rethought how ClearPath Forward services are defined, scoped, and delivered, leading to a portfolio that aligns with where the ClearPath Forward program is today, but remains flexible enough to pivot to where it's headed tomorrow.

With this new portfolio, you'll be able to drive innovation using contemporary ClearPath Forward applications, infrastructure, tools, and skills – without taking your eye off of “business as usual.”

It makes this possible by delivering basic offerings, such as implementation services, training, education, and general consulting, while also extending to include comprehensive efforts around application enrichment and support, as well as managed services and outsourcing.

These capabilities are encompassed in the three core service areas that make up the new ClearPath Forward Services portfolio: Application Enrichment Services, Product Implementation Services, and Managed Services and Outsourcing.

Simple Portfolio. Comprehensive Support.

Application Enrichment Services

With the help of our Application Enrichment Services, you'll be able to plan and execute the technology modernization efforts you need to keep your ClearPath Forward system at the center of your data center environment.

By leveraging our unparalleled ClearPath Forward expertise – as well as our knowledge of industry-standard and open source environments – you can holistically measure and understand your organization's ability to adopt emerging technologies, address new challenges, and capitalize on disruptive trends.

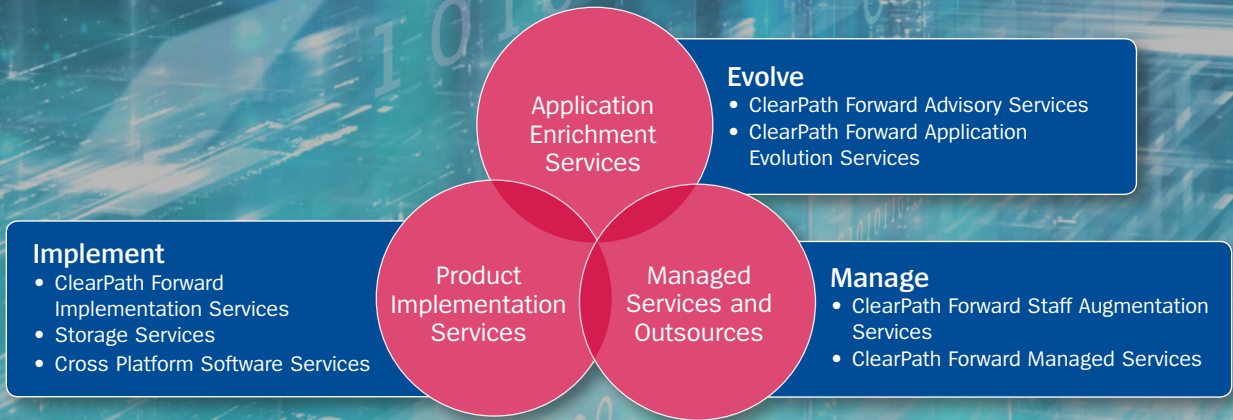

This way, you can develop high-level business cases and implementation roadmaps for the application initiatives that deliver the highest ROI and lowest risk. Moreover, you'll determine the best way to enhance your ClearPath applications to improve functionality, ease of use, and integration with external systems, applications, and databases.

Product Implementation Services

When you use our Product Implementation Services, you'll be able to develop and deploy an implementation strategy that extends to all aspects of IT service delivery, so your ClearPath Forward systems and related technologies stay up to date with current software and hardware levels, while reflecting future functionality and capacity needs.

To that end, you'll have the support you need to adopt a predictable, cost-efficient, low-risk approach to implementing new technologies, keeping existing systems current, and readying your environment to take advantage of the latest innovations.

You'll also be able to assess your company's ever-growing storage requirements and build a data management strategy that spans both ClearPath Forward and standard systems. And you'll see how to configure, install, and implement complementary Unisys software solutions for maximum benefits across your organization.

Optimization Starts Here

Managed Services and Outsourcing

With the help of our Managed Services and Outsourcing, you can overcome staffing and resource shortfalls, make sure your business-critical ClearPath Forward systems, applications, and infrastructure maintain peak performance, and focus on the innovation initiatives you need to stay relevant and differentiated.

With the ability to access experienced resources on an as-needed basis, you'll create a continuity of ClearPath Forward skills that leaves you well equipped to keep pace with changing business goals and fluctuating demand for specific knowledge and resource levels.

And with our worldwide network of delivery centers and global service management platform, we can even manage parts or all of your ClearPath Forward infrastructure – as well as your entire data center environment – on your behalf, so you can pay more attention to running your business, not IT.

Innovation Attained

The ClearPath Forward Services portfolio helps you strike a fine balance between IT innovation and continuous delivery and operations.

When you even out these objectives, it means you'll be able to:

- Maximize the ROI your ClearPath Forward environment delivers
- Free up time, staff, and budget for strategic projects
- Use open integration interfaces and leading development practices to extract more value from your ClearPath Forward systems
- Modernize and manage IT service delivery in a hybrid IT environment
- Help your newest team members become as knowledgeable as your most seasoned employees
