

Security Questions and Unisys Answers

Can't protect critical business infrastructure & ensure improved continuity of operations? Learn from our Subject Matter Experts how to deliver comprehensive security solutions, tailored to meet your current and evolving needs.

Can't get a single dashboard view of physical & logical security systems? Unisys lets you leverage converged technologies for amplified security capabilities across physical and logical domains along with real-time actionable intelligence for effective security management.

Can't reduce operational costs while maintaining security levels? We can show you how to maximize value of existing and future security investments by leveraging open, standards-based designs, migration strategies and methodologies.

Can't improve continuity of operations & real world security levels, along with user access & privacy concerns? Learn from us how to enable faster incident response, investigation and resolution, improve safety by being people & asset-centric all while ensuring integrity of physical assets.

Can't get clarity on traditional security solutions silo'd operations for potential gaps in the security posture that elevate risk? We assess, design, develop, implement, and manage mission critical network delivered security solutions just to suit your need. Our LPSS solutions are highly scalable, interoperable, software agnostic thereby enabling integration of disparate systems.

Can't justify security technologies' high price and since often they do not justify the investment value? Security technologies play a major role in risk reduction through prevention and detection of threats. It is much safer to prevent an intrusion and mitigate the consequences than experience a breach/attack that could cost the organization in millions.

Combined Physical and IT Security for the Most Complete Advanced Threat Prevention & Detection Available

As organizations expand and grow their supply chains, move to cloud and mobile platforms for cost savings and efficiency while they also manage network and physical security, there hasn't been a way to view the security architecture in a comprehensive way until now.

Unisys unifies physical and IT security for the most complete advanced threat detection and prevention available. Traditional security solutions often operate in silos and don't talk to each other, leaving potential gaps, vulnerabilities and points of entry to your network for an unauthorized user to gain access to your data.

With Unisys Location, Perimeter, and Surveillance Security (LPSS), our trusted advisors will show you how many of the world's most important enterprises offload their physical and logical/IT security risks to us. They avoid the complexity and consequences of managing it themselves, and let us do it for them so they can focus on their businesses, and we can do it for your business too.

Why Unisys?

Unisys is one of the only a few global players in security system integration with deep experience in implementing large-scale, end-to-end security systems that defend and protect places, people, assets and data. We assess, design, develop, implement, and manage mission-critical converged IP security solutions. Our LPSS solutions are highly scalable, interoperable, open/standards-based, software agnostic with proven, re-usable libraries for integration of disparate systems and optimization of price, performance and functionality.

Award Winning Portfolio:

ADVANCED PRODUCTS

LOGICAL

- Stealth(core)
- Stealth(cloud)
- Stealth(compute)
- Stealth(mobile)

PHYSICAL

- LPSS
- Identity Management
- Image Processing
- Fraud Detection

EXPERIENCED PROFESSIONAL SERVICES

TECHNICAL

- Testing
- Incident Response
- Architecture

EFFICIENT MANAGED SERVICES

- SIEM
- Endpoints
- Firewalls
- Applications
- Assurance
- GRC
- Threat Analysis
- Data Loss Prevention
- Video/Image Management

STRATEGIC

- CISO Advisory
- Security Assessments
- Security Planning
- Systems Integration

- Intelligent Video Surveillance, CCTV
- Central Command and Control
- Video Storage and Retrieval
- Physical and Logical Access Control
- Intrusion Detection, Radar, Virtual
- RFID Asset Tracking Technologies
- CCTV server consolidation and virtualization
- Identity Management and HR Systems
- Perimeter Controls/Fencing
- Non IT (components, lighting, vehicle block barriers)
- Building Management Systems
- Enterprise Content Management (ECM) Software
- Information Management
- Wireless Networking
- Biometrics and Smart Cards
- Automated Number Plate Recognition
- GIS Mapping Systems
- Audit using BEATO

Unisys' LPSS solution optimizes the investment made in legacy security solutions as well as addressing future security needs today. Our trusted advisors balance risk management, security technology with existing infrastructure to maximize your investments. Unisys is a unique Security System Integrator with solutions that bring together our criminal justice physical and logical/IT security breadth and depth of implementation and design experience to the public and private sector.

LPSS Solution

Unisys' LPSS solutions begin with a consultative approach, delivered as a system integrator and support through the entire project life cycle. Our solutions are comprehensive, end-to-end protective security solutions that are custom architected depending on each customers' requirements (ranging from securing a room to securing a national border), LPSS integrated solutions that can be sold together or separately:

Unisys Award Winning Solutions for:

- Cloud Security
- Enterprise Security
- Endpoint Protection
- IoT Security
- ICS/SCADA Security
- Data Center Consolidation
- Regulatory Compliance
- Micro Segmentation
- Access Control
- Identity Management
- Video/Image Security
