

HIGHLIGHTS

How do you plan to handle endpoint attacks? Do you still handle these in silos? In a recent Ponemon survey, 71% of respondents mentioned end point security threats have become more difficult to stop/mitigate in the last two years.

How do you address endpoint security administration and implementation challenges? Drastic increase in administration workload over a decade, compounded with regulatory and compliance requirements. Multivendor endpoint security environment have negative impact on productivity and brings in integration challenges during implementation.

Need help with the reducing operational complexities of managing endpoints? Managing multiple endpoint security solutions such as anti-virus/spyware, NAC that connect to the network is extremely complex. Implementing multiple management console with respective policies and reports can be overly complex for any enterprise directly affecting its productivity.

Looking to arrest the steep rise in TCO of your Security Infrastructure? Using inefficient security solutions can increase overhead costs and have a negative impact on employee productivity. It significantly inflates your CAPEX and OPEX.

We boast of our industry vertical experience: managing large consumer goods to aerospace clients

Advanced Protection Against Modern Threats

The current IT environment being highly complex, with dynamically changing threat vectors, IT staff is under tremendous pressure to prevent damaging attacks, with stagnant resources. 2014 experienced highest number of targeted attacks, zero day threats and 317 million new malware variants¹. **Unisys End point Security (EPS)** is a broad range of A la carte services that helps organizations proactively counter modern day cyber threats. Unisys comprehensive EPS capabilities being vendor agnostic provide organization with a competitive edge by delivering hassle free security and minimal lead time to secure evolving infrastructure. Complimenting EPS, Unisys offers market leading **Managed Security Services (MSS)** capabilities across Security Information and Event Management (SIEM), Security Device Management (SDM), Governance Risk and Compliance (GRC) and Identity and Access Management (IAM).

Wide-ranging Endpoint Services

With over a decade of experience in managing end points, Unisys provides end point security lifecycle management from infrastructure design, administration and management to customized reporting and integration with advanced analytics platforms. Unisys EPS provides Infrastructure end point management and administration, AV, FW, HIPS, IDS/IPS, HD-Encryption, NAC, Real-time monitoring and remediation services. Unisys leverages multiple threat intelligence sources to provide proactive protection and align our service offerings to the evolving threat landscape, based on CSI methodology. We are one of the few service providers that offer a comprehensive suite of Managed Security Services. We partner with industry leading security vendors to provide best in class, proactive EPS to our clients worldwide.

- Integration with signature less technology (behavioral) to protect from modern and emerging threats such as APTs.
- Endpoint integration with SIEM, provides advanced integration capabilities.
- Ability to provide market leading integrated services. Unisys is a market leader in End User Services magic quadrant. Simplified management - enterprise wide policies deployment through a single management console.
- Security compliance requirements vary from industry to industry. We have significant experience and presence in Govt., Federal, BFSI, Airlines, Retail, Manufacturing, Telco, Energy/Utilities, Education, Healthcare and Transportation.

The Unisys Differentiators

- Exhaustive breadth and depth of end point security services, well complimented with SIEM, GRC and IAM to manage your complete security infrastructure
- Follow the sun model allows uninterrupted and seamless services through our 8 SoCs to cater to our clients spread across multiple geographies. Service Level Agreement monthly compliance reporting
- Whilst most vendors offer limited capabilities in Managed Security Space, Unisys offerings cut across every element of enterprise security
- Partnership with industry leading end point security vendor to provide, highly customized security services to meet specific client demands
- In-house research and development of Intellectual Property (IP) allows our clients to take informed decisions (actionable intelligence delivered).

Why Unisys

Our Security portfolio unifies highly advanced products and efficient, cost saving managed services architected by our trusted consulting advisors, spanning the physical and cyber domains. Unisys MSS enables organizations to efficiently manage security at controlled costs with optimized resource utilization.

We leverage our **advanced event analytics** tools that run on UNCAAP (Unisys noise cancelling advanced analytics platform); proprietary security intelligence tools like BEATO; and partners with industry leaders like ArcSight to **offer noise free actionable intelligence**. Unisys will deploy and manage devices and certified experts on a 24x7x365 basis – even through the cloud, on demand, to proactively deter attacks, respond and contain incidents round the clock.

“Unisys showed a good understanding of the need to move beyond security as technology and start thinking of it as a larger enabler of corporate risk management”

HFS Blue Print Report

Key Business Benefits

Unisys Endpoint Security Services is designed in a customer centric way so as to ensure the following benefits to our clients;

- Rapid service deployment
- Simplified management
- Compliance to standards and processes
- Lowered TCO
- Round the clock support

“Unisys is in a position to provide a client’s infrastructure and security services that would enact threat resolutions more quickly and with more knowledge of the infrastructure”

Nelson Hall, NEAT Evaluation 2014
