Providing a Safe and Memorable Experience for World Cup Fans

The Business Challenge.
Offer an exciting, immersive experience for football fans during the 2014 FIFA World Cup, and protect the stadiums’ systems and infrastructure from possible threats.

The Solution.
Unisys Infrastructure Transformation and Digital Workplace Services to support 13 integrated command and control centers; includes field services, maintenance and support, and physical installation services.

Results and Benefits.
- Improved visibility for officials to effectively manage and monitor public safety and security communications, including police, military and fire services
- Achieved uninterrupted security and enhanced viewers’ experience across all stadiums
- Ensured business continuity beyond the World Cup with the infrastructure being used by state governments

“With such a large sporting event taking place and with millions of tourists visiting Brazil, we needed a high performance and high availability IT infrastructure to support mission critical applications. Unisys, as part of a consortium, helped to provide the necessary infrastructure components to ensure the successful running of 13 World Cup data centers throughout the month-long event.”
